INTRODUCTION

In today's digital world, a professional resume plays an important role in presenting an individual's educational qualifications, technical skills, projects, internships, certifications and other professional achievements. A well-designed resume not only provides information about a candidate but also creates a positive first impression among recruiters, academic institutions and professional organizations. With the increasing use of web technologies, resumes can be developed as interactive and visually appealing web pages instead of relying only on traditional document formats.

The Resume Web Page project is designed and developed using HTML and CSS to create a professional, modern and visually attractive online resume. The main objective of this project is to present personal, academic and professional information in a structured and easily accessible format. The webpage contains different sections such as About Me, Career Objective, Qualifications, Technical Skills, Projects, Internships, Certificates, Strengths and Contact Details. Each section is organized clearly to make the information easy to understand and navigate.

The project also focuses on improving the visual presentation of the resume through modern web design techniques. CSS is used to implement layouts, colors, typography, borders, shadows, gradients, responsive design and interactive hover effects. A three-dimensional styled background and layered visual effects are incorporated to provide a premium and professional appearance while maintaining readability. Navigation links are also provided so that users can quickly move between different sections of the resume.

The project demonstrates the practical application of fundamental web development concepts, particularly HTML structure and CSS styling. It provides an example of how static web technologies can be used to transform conventional resume information into an attractive digital profile. The responsive design also allows the webpage to adapt to different screen sizes, including desktops, tablets and mobile devices.

Overall, the Resume Web Page project provides a simple, professional and user-friendly platform for presenting personal and career-related information online. It demonstrates the importance of combining proper content organization with effective web design to create a professional digital identity.

<p>

Hello! I am R Kushma, currently pursuing my MCA in Data Science at Alliance University. I have completed my BCA and have a strong interest in computer applications, technology, data analysis and software development. I enjoy learning new technologies, improving my technical skills and working on academic and practical projects.

OUTPUT

OVERALL OUTPUT PAGE:

CONCLUSION

The Resume Webpage project successfully demonstrates the development of a professional and visually appealing personal resume using HTML and CSS. The webpage presents important information such as personal details, career objective, educational qualifications, technical skills, projects, internships, certificates, strengths, and contact information in a well-organized structure. The use of HTML provides a clear and semantic structure, while CSS is used to improve the overall appearance, spacing, typography, colors, tables, cards, navigation bar, and footer.

The project also incorporates modern web design concepts such as gradients, shadows, animations, hover effects, responsive layouts, and a dynamic 3D-style background. These features give the resume a premium and professional appearance while making the webpage more engaging for users. The responsive design ensures that the resume can be viewed effectively on different screen sizes, including desktops, tablets, and mobile devices. A print-friendly layout is also included, making the resume suitable for generating a physical or digital copy.

Overall, this project provides practical experience in front-end web development and demonstrates how HTML and CSS can be combined to create a structured, attractive, responsive, and professional resume webpage.
