4	CONCLUSION	19

INTRODUCTION

The Semantic Department Website is a simple web development project created using HTML and CSS. The main purpose of this website is to provide basic information about the MCA department in an organized and user-friendly manner.

The website contains different sections such as Home, About, Faculty, Courses, Time Table, Achievements, Events and Contact. A navigation bar is provided at the top of the page to help users easily move between different sections of the website.

The Home section introduces the MCA program and displays important areas such as Cyber Security, Gen AI, Data Science and Game Development using images. The About section provides information about the college, its vision, mission, facilities, objectives and reasons for choosing the college. The Faculty and Courses sections provide details about faculty members and subjects offered by the department. A semester-wise subject table and a weekly time table are also included.

The Achievements and Events sections show various academic and extracurricular activities. Finally, the Contact section provides the college address, email, phone number and a simple contact form. The project mainly focuses on using basic HTML elements, CSS styling, links, images, lists, tables and forms to create a complete department website.

CONCLUSION

The Semantic Department Website was successfully designed using basic HTML and CSS. The project helped in understanding how different HTML elements can be combined to create a complete and well-organized website. Sections, headings, paragraphs, images, lists, tables, navigation links and forms were used to present the department information clearly.

CSS was used to improve the appearance of the website by adding colors, spacing, borders, alignment and a fixed navigation bar.

The website provides a simple and comfortable way for students and visitors to view information about the college and MCA department. The Home page gives an introduction to the program, while the About, Faculty, Courses, Time Table, Achievements and Events sections provide useful academic information.

The Contact section also allows users to enter their details through a simple form. Overall, this project provided practical knowledge of basic web development concepts and helped in understanding how HTML and CSS can be used together to create a functional and attractive college department website.
