INTRODUCTION

The Kush Portfolio is a personal portfolio website developed using HTML and CSS. The main purpose of this project is to present personal information, educational qualifications, technical skills, and contact details in a simple and organized manner.

HTML is used to create the structure of the website, while CSS is used to design and style the different elements. The website contains sections such as Home, About Me, Qualification, My Skills, and Personal Details. A navigation bar is provided at the top, allowing users to easily move between these sections.

The Home section displays the name KUSHMA and the title MCA Data Science Student. It is slightly highlighted using a light background, border, and simple content box. The About Me section provides information about the student's education, interests, and internship experience. The Qualification section displays academic achievements, while the Skills section lists technical skills such as HTML, CSS, JavaScript, Python, and SQL.

The Personal Details section provides basic contact information such as name, email, and phone number. The website also uses responsive CSS so that the layout and text can adjust properly on smaller screens.

Overall, this project demonstrates the basic concepts of HTML structure, CSS styling, webpage navigation, spacing, section organization, and responsive design. It provides a simple and effective way to create and present a personal portfolio website.

INPUT CODE

```
<!DOCTYPE html>
<html>

<head>
  <title>Kush Portfolio</title>

  <style>

    * {

CONCLUSION

The **Kush Portfolio** project successfully demonstrates the development of a simple personal portfolio website using **HTML and CSS**. The website presents important information such as personal details, educational qualifications, technical skills, and internship experience in a clear and organized manner.

HTML is used to create the structure of the webpage, including headings, paragraphs, sections, lists, and navigation links. CSS is used to improve the appearance through proper colors, fonts, spacing, borders, alignment, and layout. The navigation bar allows users to easily move between the different sections of the portfolio.

The project also includes a **responsive design** using CSS media queries, allowing the website to display properly on different screen sizes. The highlighted Home section provides a simple and attractive introduction while maintaining an overall clean design.

Overall, this project provides practical knowledge of **HTML, CSS, webpage navigation, responsive design, and basic website layout**. It also provides a good foundation for developing more advanced and interactive portfolio websites in the future.
